WINTZ BOOTS

16 Lynnwood Dr. SE
Calgary, AB T2C 0S6
587-834-0788

Skillfully handcrafted in Calgary bringing traditional bootmaking techniques to life, one pair at a time

How to commission your boots

1. Send an inquiry with your location, intended use, style preferences, budget, timeline, and any reference images.
2. Discuss the design, leather choices, and fitting arrangements with Wintz Boots.
3. Attend an in-person measuring appointment in Calgary, or arrange a guided remote-measuring session.
4. Once design choices and required measurements are complete, receive a final quotation. A deposit of 50% of the total cost is required before last development, leather purchasing, or further production begins.
5. Wintz Boots develops or modifies lasts, prepares fitting boots, confirms fit, and constructs the final pair.
6. Arrange delivery or collection. Typical lead time is 3–6 months, depending on materials, design, and fitting. For remote orders, fitting boots are mailed to the customer for evaluation. The customer pays shipping; a further $200 is charged if the fitting boots are not returned. Remote fitting instructions and the return process

Custom boot pricing

Traditional handmade cowboy boots start at $2,500 CAD per pair. The base price includes a 12-inch shaft, a round toe, a choice of standard 1¼-inch or 1⅝-inch heel height, and a choice of standard three-row decorative stitching patterns (three rows on each boot).

Specialty leathers, inlays, overlays, tooling, unusually elaborate decoration, and other custom requests are quoted individually.

Boot Tops: Choice of top cut
Stovepipe, Shallow Scallop, Deep Scallop, Rose Scallop

Pull Tabs: Choose setting of pull tabs
Over the top, Flush, ½" above, 1" above
Mule Ears +$150

Standard 12" shaft	(Included)
Each inch of shaft height above 12"	+$70

Choice of standard three-row stitching pattern	(Included)
Each additional row of stitching	+$100
Original custom-designed stitching pattern	+$150

Toe Shape:

Round toe	Included
Square toe	+$150
Chisel toe	+$150
Toe Bug	+$150

Heel Height:
Standard 1¼" or 1 ⅝" heel height (Included)
Special-order 7/8" or 2¼" heel height. +$160

Heel Shapes: Straight, Walking, Riding, Underslung

Spur Shelf can be added upon request

Measuring instructions — consultation worksheet

These instructions are an orientation for customers, not a substitute for a guided measuring appointment. Do not rely on self-reported measurements alone to finalize the last or fit. Wintz Boots will confirm which measurements and tracings are required for each order.

Before you begin
You will need a flexible measuring tape, two sheets of paper large enough for each foot, a pencil, and the socks you expect to wear with the boots. For remote fittings, arrange a video call and, if possible, have another person assist. Measure both feet separately and record all measurements in the same units.

A. Foot tracings
1. Place paper flat on a hard floor. Stand with your weight distributed naturally while wearing your intended socks.
2. Have a helper hold the pencil upright and trace around each foot without pressing into the skin. Label LEFT and RIGHT.
3. Mark the inner and outer ball-joint positions (the joints at the base of the big and little toes).
4. If requested during the fitting session, add a second tracing showing the contact edge of the foot. Do not estimate or alter the outline to make it symmetrical.

B. Foot girth measurements
With the foot relaxed and unloaded as directed during the consultation, wrap the tape around the specified points. Keep it flat and comfortably snug, not loose or painfully tight. Read the measurement without compressing the foot. Record left and right separately.

Measurement Where to measure
Ball: Locate the prominent joints at the base of the big toe and little toe. Wrap the measuring tape around the foot so it passes over both joints and underneath the ball of the foot. The tape will usually sit at a slight angle rather than straight across the foot. Measure comfortably snug, without compressing the forefoot.
Waist: Measure around the narrower, softer portion of the foot immediately behind the ball joints. Keep the tape snug and closely fitted to the contours of the foot.
Low instep: Feel along the top of the foot behind the waist until you locate the raised ridge of bone across the instep. Pass the tape over this ridge and around the underside of the foot. Keep the tape snug against the foot without compressing the tissues.
High instep: Locate the bony prominence on the outside of the foot, toward the rear of the instep. Pass the measuring tape over this point and around the foot, following the position shown in the illustration. Keep the tape evenly positioned and comfortably snug.
Heel / heel-to-instep: Wrap the tape diagonally around the most prominent part of the back of the heel and across the front of the ankle. Keep the tape snug

C. Shaft and calf measurements
Choose the desired finished shaft height, measured according to the reference point confirmed by Wintz Boots. Measure vertically from the floor to each requested level, then take the circumference around each leg at that level. For pull-on boots, begin at the 10-inch level and continue in 2-inch intervals to the intended top height, unless directed otherwise. Record both legs separately.

D. Record your measurements

Measurement	Left	Right
Ball girth	_____	_____
Waist girth	_____	_____
Low instep girth	_____	_____
High instep girth	_____	_____
Heel / heel-to-instep girth	_____	_____
Calf at 10”	_____	_____
Calf at 12”	_____	_____
Calf at 14” (if needed)	_____	_____
Calf at 16” (if needed)	_____	_____
Other requested height	_____	_____
